k to 12 pc hardware servicing learning module free downloadThis is not just a protocol. It's an entirely different server stack, optimized for serving a single low-resource/low-bandwidth client (wish is the only client for some time). ~~~ jordanthoms Can you please expand on this? Sorry if I missed it. ~~~ jwfxpr I don't think there's anything I can directly cite, but: the server introduces two things that are fundamentally different from what you see in other protocols: 1\. It doesn't require any authentication. 2\. It has no state. What it does require is that the client can send GET requests, and

that the server can handle a throughput that would support one GET per CPU cycle. The client (wish) only requires one CPU, and the server can offload computation to the GPU on devices that have access to the GPU (which is not the case for Android phones, at least today). ------ m000 This is very interesting but it has very little to do with modern-day web design ~~~ jordanthoms Can you explain what you mean? ------ duncancarroll Reminds me a lot of the Mosaic protocol [------ jozi9 What is a word for this type of communication? ------ e03179 Can this be used for distributed computing? ------ ghthor What happens when this is done over a shell? ~~~ lincpa I had the same question; How about remote control of a shell? More seriously, could we talk directly over HTTP through a shell? ~~~ cyphar I'm not sure what you're trying to do, but GNU's netcat already has a TCP receiver built-in. ~~~ rquantz What I'm trying to do is _cleanly_ run a TCP session over HTTP (think SSH over HTTPS, but for any port). ~~~ crocal You should probably have a look at WebSockets, which
